

Kaplan University – Maine Campuses: Online Degree Programs in Fire Science and Emergency Management

At Kaplan University, we offer online degree programs that could help you pursue your educational and professional goals. Our fire science programs could help you develop an understanding of the interagency coordination necessary for fire prevention, safe and successful fire-incident command, arson investigation, and life-safety education. Topics of study include strategic planning, leadership, financial administration, and emergency services management. Our fire and emergency management degrees have also been designed to address the new challenges in technology, human resource management, and fiscal responsibility faced by emergency services personnel.

The online courses closely follow the Fire and Emergency Services Higher Education (FESHE) national curriculum model. Programs are comprehensive and the online flexibility is ideal for individuals in the fire science and emergency management fields who may work inconsistent hours.

Degree Programs Available:

- Bachelor's of Science in Fire and Emergency Management
- Bachelor's of Science in Fire Science
- Associates of Applied Science in Fire Science
