To Maine's Fire/EMS Service Leadership,

In the coming days, Maine's Fire and EMS Services will be hearing the details of the COVID-19 Vaccination Program. While there are still some details to be finalized, we are aware that EMS clinicians, Firefighters and First Responders are going to be considered in the highest of priorities for those needing to be vaccinated.

Potential sites in each county have been identified and each is working their way through the process to be ready to administer the vaccinations as soon as they become available.

The Maine Fire Chiefs' Association is urging all of its' members to stay informed as new information comes available, ensure that firefighters and EMS clinicians are well informed, and to assist where you can, based on the need, the vaccination sites in your county. These agencies that are working towards becoming vaccination sites are all doing so for the greater good of the First Responder Community, they will likely need assistance, it is our hope that we all will step up and assist where needed to ensure that Maine's Firefighter's, EMS Clinicians and all First Responders are kept safe through this vaccination program.
